

Semantic Web Company Boilerplate for Partners

Text snippets for your communication around Semantic Web Company

About Semantic Web Company

Semantic Web Company is the leading provider of graph-based metadata, search, and analytic solutions. The company helps global 500 customers manage corporate knowledge models and extract useful insights from big data sets. Among many other customers, Credit Suisse, Council of the European Union, Roche, Boehringer Ingelheim, Adidas, Springer Nature and the World Bank benefit from linking structured and unstructured data for organizing information at scale. Founded in 2004, the Semantic Web Company is the vendor of PoolParty Semantic Suite (www.poolparty.biz) and was named on KMWorld's prestigious list in 2016 and 2017 as "100 Companies that Matter in Knowledge Management."

What we do?

Semantic Web Company is a world leader in providing out-of-the-box semantic web solutions. The company has been globally recognized as the leading and most innovative Linked Data technology provider by Fortune 500 companies. We have a strong focus on innovation, with a current investment of 17 million euros in research projects. The gained expertise helps to provide cutting-edge enterprise solutions to the market based on semantic technologies. Our range of services include:

- **Semantic Data Management:** Semantic Web Company lets you explore your data beyond the obvious by enriching it semantically. A semantic layer on top of your smart applications will increase data quality and interoperability and boost your metadata automatically. Furthermore, it will help you overcome acknowledged limitations of relational databases and data lakes by linking your heterogeneous data semantically.
- **Semantic Content Management:** Semantic Web Company offers the conceptual framework and technical requirements to make structured content happen based on semantic technologies. You will be able to produce knowledge that can easily be searched, found and discovered no matter where your data repositories are. Structured content is at the base of smart applications that reuse available content automatically across multiple channels.
- **Semantic Web Starter Kit:** The Semantic Web Starter Kit is a straightforward service that introduces you to the possibilities of semantic technologies in a cost-effective and agile manner. You will benefit from low risk and immediate results as we deliver in 10 to 20 days a first prototype built up to your specific use case. The Starter Kit is the best solution if you are aware of semantic technologies but don't know where to start. It's also a great deal if your initiative requires various stakeholders to be involved and you want therefore to mitigate common starting issues.

PoolParty Semantic Suite

PoolParty is a semantic technology platform provided by the Semantic Web Company, a pioneer in the semantic web since 2001. The product is recognized by industry leaders as one of the most advanced semantic middleware on the global market. PoolParty supports enterprise needs in information management, metadata management, cognitive computing, data analytics and content excellence. Typical PoolParty users such as taxonomists, subject matter experts and data scientists can easily build and enhance knowledge graphs without coding skills. Boehringer, Credit Suisse, Roche and The World Bank are among many clients benefiting from transforming data into expert or customer insights with PoolParty.

Our Innovation Focus

Semantic Web Company funds research and innovation projects since 2004 with the aim of combining semantic technologies with related research fields such as Big Data, machine learning, and NLP. A dedicated interdisciplinary research team ensures that the future development of Linked Data technologies meets the industry demands. Results of our semantic research projects find their way directly into PoolParty Semantic Suite.

PoolParty Academy

Semantic Web Company and its flagship product PoolParty Semantic Suite offer three E-Learning tracks about semantic web technologies suitable for beginners, information managers, developers, and IT-architects. PoolParty Academy training will introduce you step-by-step to the world of semantic technologies. The certification programs cover use cases, the technical methodology, and hands-on experience with PoolParty Semantic Suite.
